Pick and place area: (0.98)

8 Recommended reflow temperature profile using lead-free solder paste.

Reflow method : IR reflow
Number of reflow cycles : 2 cycles max.
1) Reflow time
Duration above 220°C, 60 sec max.
(peak temperature : 250°C max)
2) Pre-heat time
Pre-heat temperature (min) : 150°C
Pre-heat temperature (max) : 180°C
Pre-heat time : 90-120 sec.

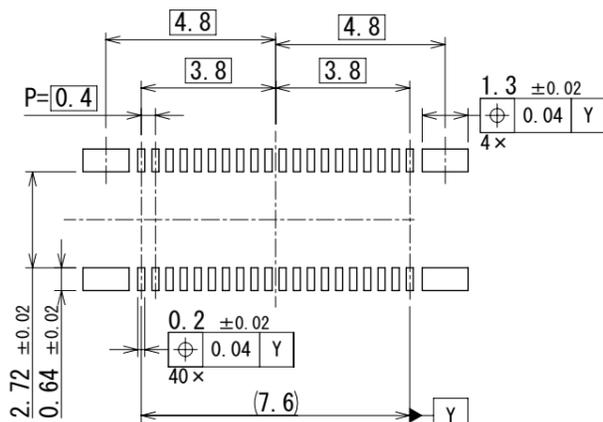

HRS DRAWING FOR REFERENCE

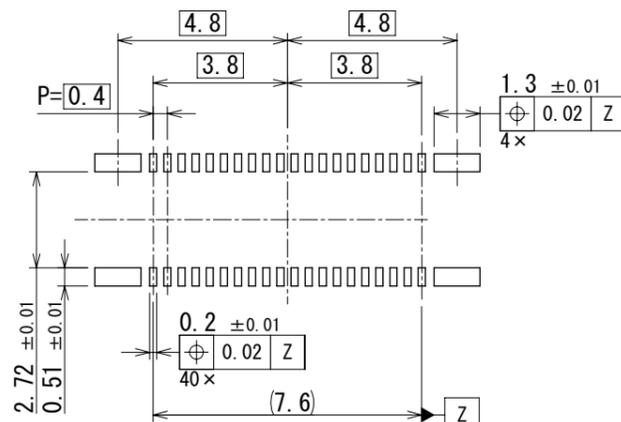

Note

1. All lead co-planarity will be 0.1mm max.
2. HRS mark and cavity number are indicated at approximate location.
3. Plating specifications
Contact area : Gold 0.05 μm min
SMT lead : Gold 0.05 μm min
Under plating : Nickel 1 μm min
(Surface : Sealing)
5. This product satisfies halogen free requirements defined as 900ppm max chlorine, 900ppm max bromine, and 1500ppm max total of chlorine and bromine.
6. This product complies with RoHS.
8. This temperature profile is based on the suggested metal mask and footprint. Please contact us if using different settings from our recommendation.

Recommended PCB dimensions

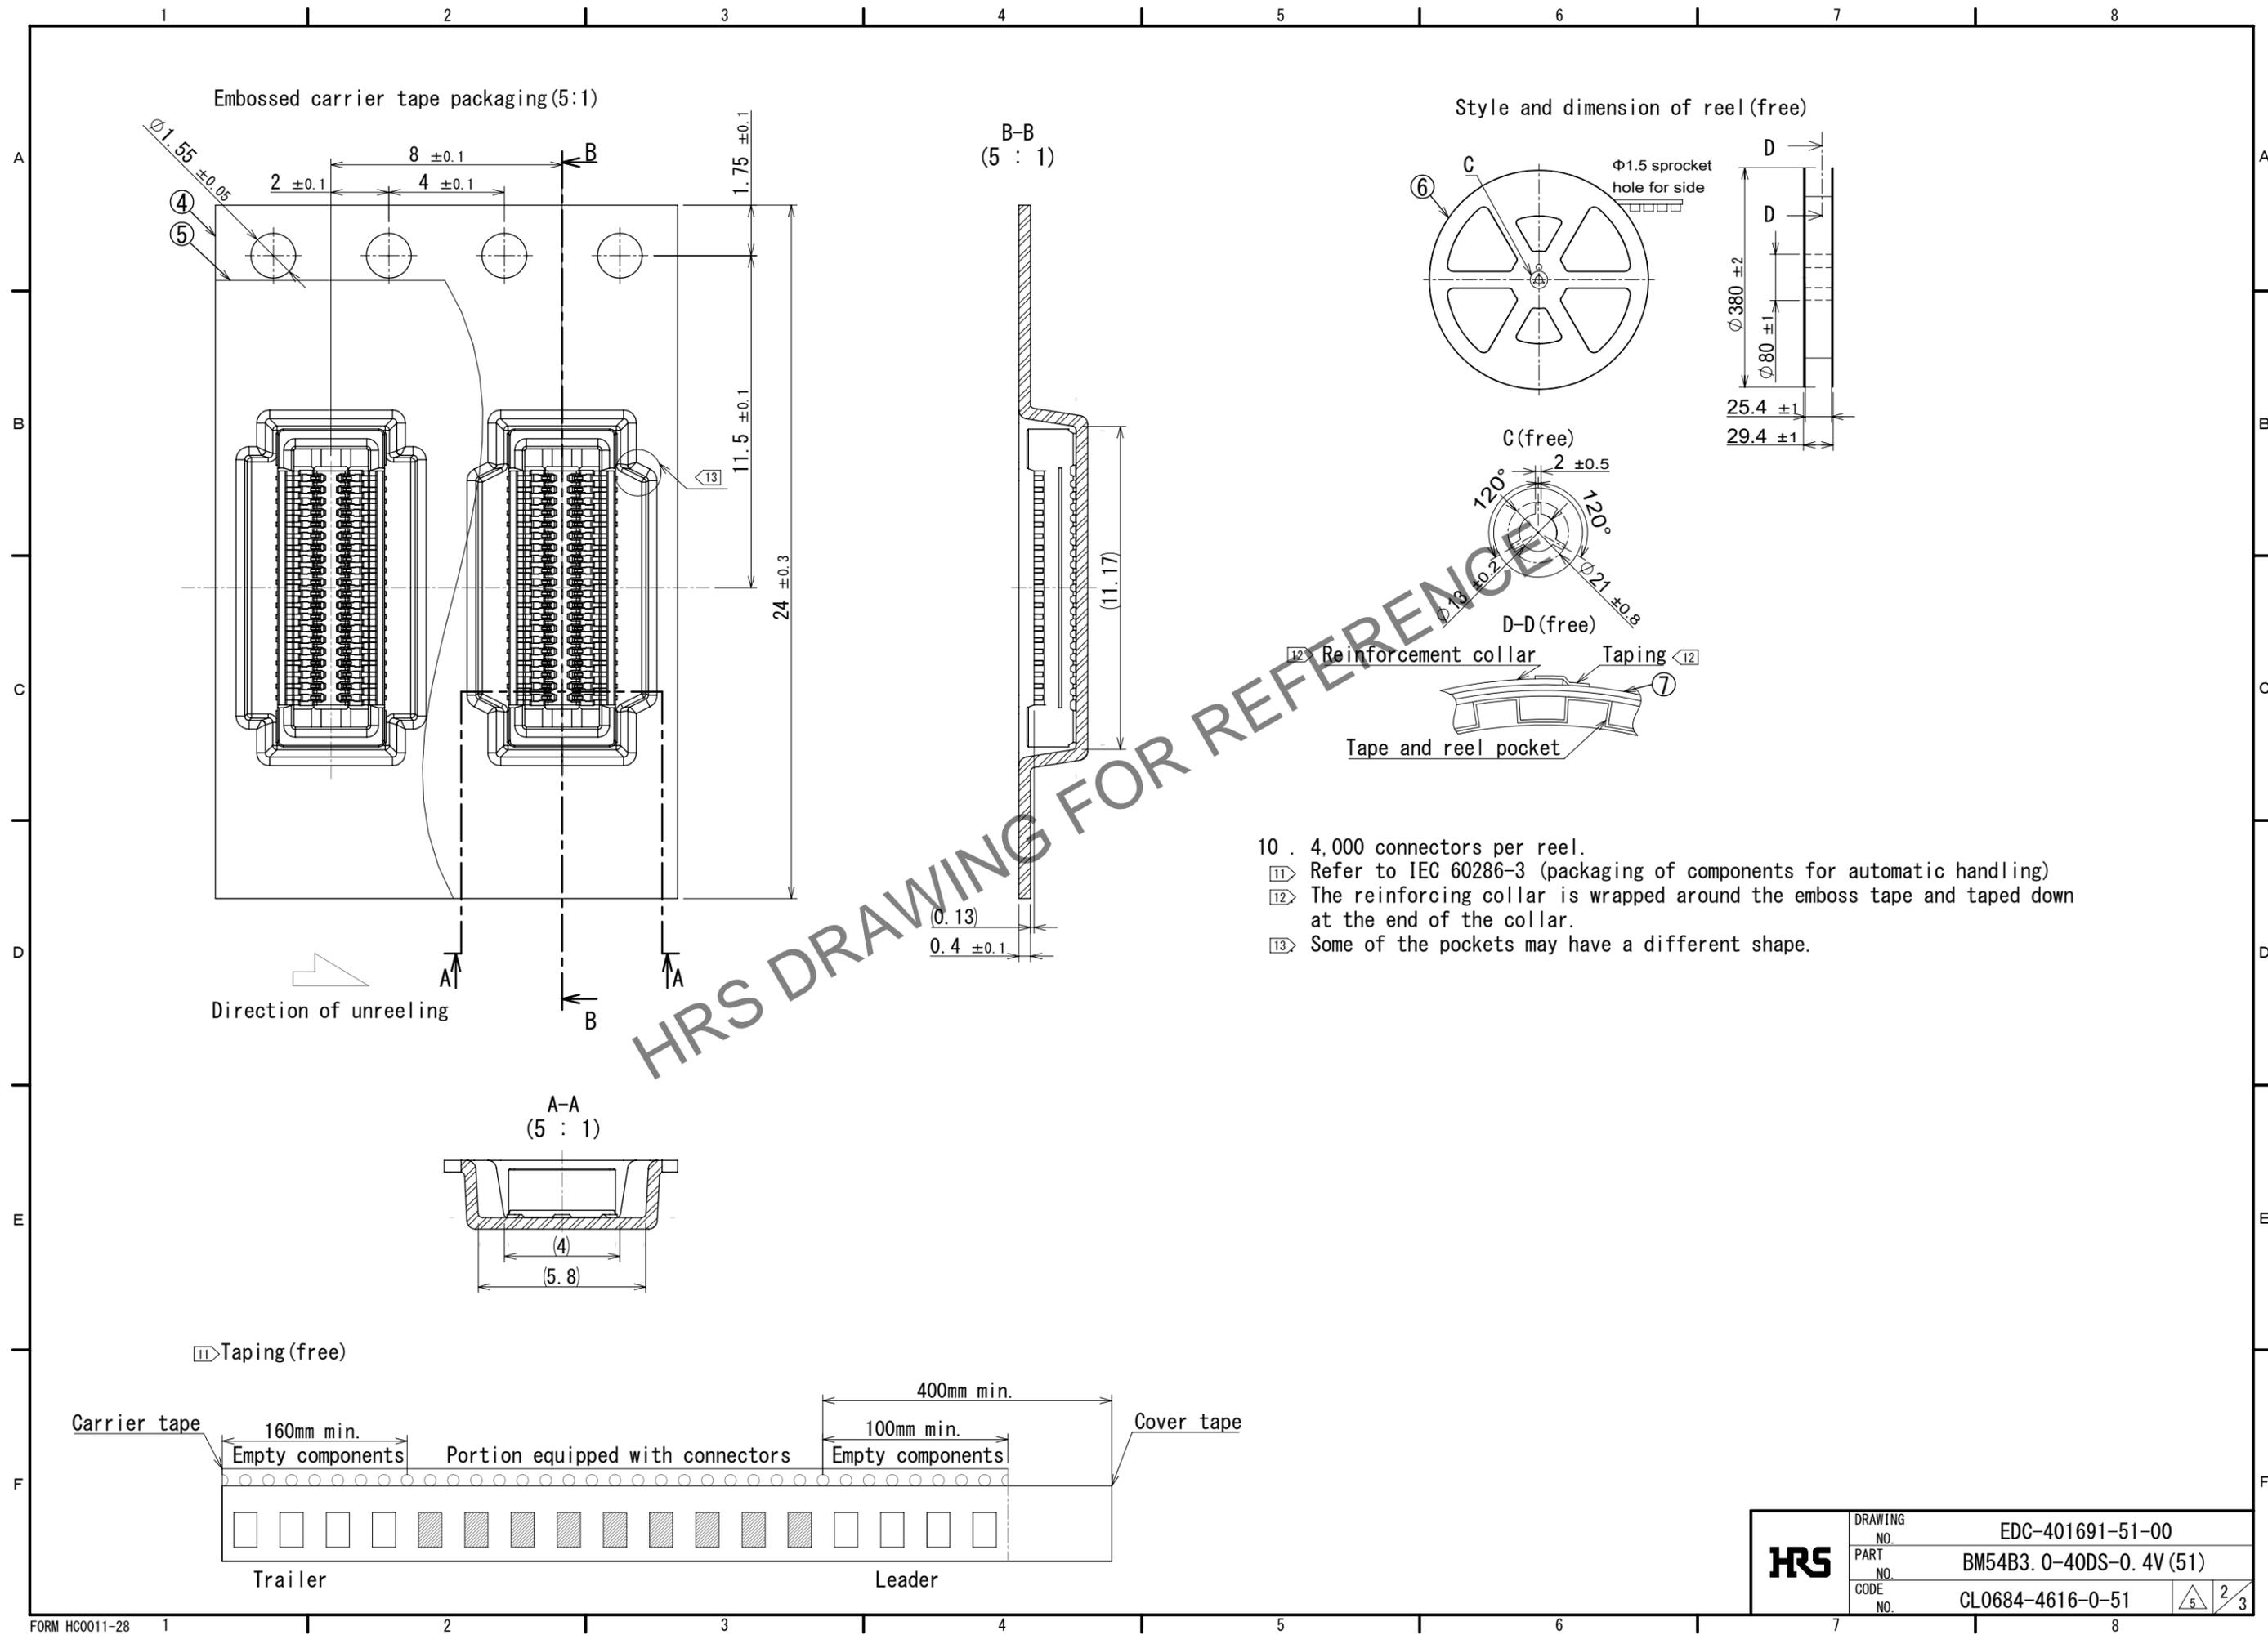

Recommended metal mask dimensions
Metalmask thickness : 100 μm

- 10 . 4,000 connectors per reel.
- 11 Refer to IEC 60286-3 (packaging of components for automatic handling)
- 12 The reinforcing collar is wrapped around the emboss tape and taped down at the end of the collar.
- 13 Some of the pockets may have a different shape.

14. Please refer to the product guideline for detail of connector handling.

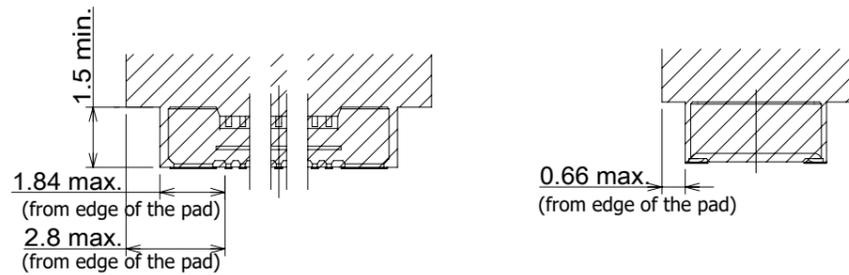

The position between the connector and PAD

▨ Connector lead on PAD layout
□ PAD layout

Connector area

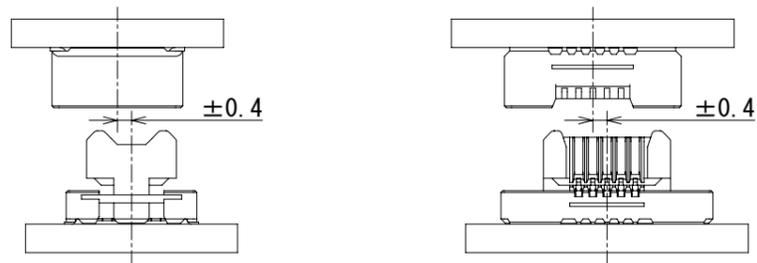

(1) ▨ is connector area or floating area, if other parts enter this area, it is possible to affect floating performance.

▨ Connector area
■ PAD

Mating method

(1) The alignment dimension is ± 0.4 mm in the X and Y directions. After the start of mating, follow the alignment and mate perpendicularly to the board without applying an overloading to the connector

Misalignment Allowance in Mated Condition (Floating Range)

(1) Because of floating design, this connector has a ± 0.4 mm board misalignment tolerance in the X and Y directions when mated. However, it is not suitable for absorption when the range of misalignment constantly changes due to vibration, etc. The number of repetitions of floating movable operations is stipulated to be no more than 10 times

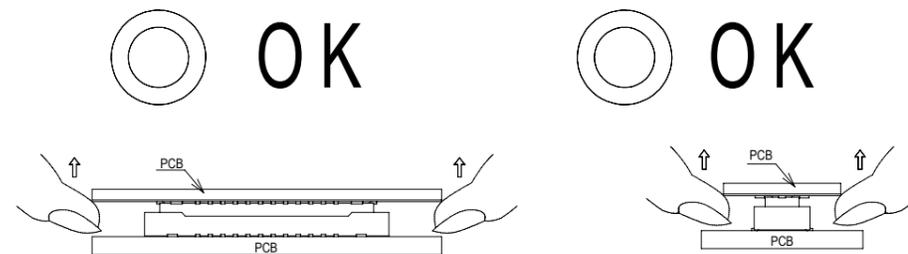

Securing PCBs

(1) This connector can absorb misalignment between PCBs, but not vibration. If you support PCBs only with the connectors without taking any fixing measures, the load on the connectors will be excessive and may cause broken or contact failure. Be sure to secure PCBs except for the connectors as shown below to prevent the board from moving. This connector connects the board to the board. When using mounting to FPC, fasten the board and FPC to the case separately

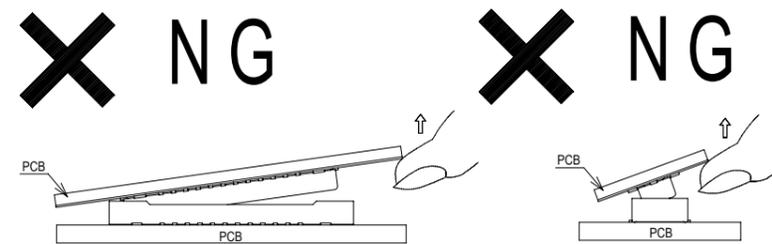

Un-mating method

(1) Un-mate the connectors parallel to each other.

(2) When un-mating the connector, pull it out in parallel. If it is un-mated in an inclined position, connector may deform.
